

BPM, Collaboration, and Workflow using Microsoft Office SharePoint Server (Lunch and Learn)

Microsoft Office SharePoint Server 2007 (MOSS) is an integrated suite of server capabilities that provides robust functionality around Electronic Content Management, Business Process Management, and Forms Workflow. Many organizations already own pieces of SharePoint, but struggle to leverage the tool to solve real business problems outside of team workspaces. In this Lunch and Learn, we will cover the various feature areas of MOSS and the business problems that each of them solve. We will discuss the different versions of SharePoint and compare / contrast what is included in each. Finally, we will take a deeper dive into Business Process Management to demonstrate the various options when implementing workflow-based solutions with MOSS.

Who should attend?

- IT Managers who are involved in application development and enterprise integration
- Enterprise Architects who drive the technical vision for the organization
- Senior Leadership who wants more flexibility and agility out of existing IT assets

Delivery and duration

Course Length: 2 hours instructor-led Lunch and Learn

After completing the course, learners will be able to:

- Describe SharePoint capabilities around Portal, Electronic Content Management, Enterprise Search, Business Intelligence, Collaboration, and Business Processes & Forms
- Understand the various SharePoint Products & Technologies – Windows SharePoint Services v3; MOSS 2007 Standard; MOSS 2007 Enterprise; Microsoft BPM Independent Software Vendors
- Communicate the business problems that each of the SharePoint Products and Technologies solves and the associated “tipping point” for upgrading to the next level
- Recognize different scenarios for implementing workflow including Document Workflows, Forms, Custom Workflows, and Business Process Management
- Take a real-world BPM scenario and map applicable out-of-the-box features to each of the product levels
- Learn what capabilities a BPM ISV such as K2 or Bluespring provides on top of SharePoint
- Become familiar with the required system architecture and licensing structure to deploy SharePoint
