

Overview of Microsoft SharePoint 2007 (Lunch and Learn)

This seminar introduces IT managers and architects to Microsoft SharePoint 2007. Microsoft SharePoint 2007 is a comprehensive content management solution that accelerates information sharing across intranet, extranet, or web applications through an integrated platform. The seminar provides an overview of various business and technical challenges that IT organizations face and how SharePoint can help address these challenges. The seminar provides live demonstration and lessons learned from experienced Microsoft product consultants, implementation experts, and business analysts.

Who should attend?

This seminar was developed for IT Managers and System Architects.

After completing the course, learners will be able to:

- Understand the benefits and best practices associated with implementing and using Microsoft Share Point 2007
- Recognize challenges and common mistakes during SharePoint implementation
- Become familiar with implementation practices and lessons learned from other corporations who are using the software

Prerequisites

IT project management experience is suggested.
